

movement of the graphical user interface element beyond an edge of the second display surface.

16. The electronic device of claim **9**, wherein the graphical user interface element is a browser icon.

17. The electronic device of claim **9**, wherein the first panel is coupled to the second panel.

18. The electronic device of claim **9**, wherein the first display surface is a touch screen display.

19. The electronic device of claim **9**, wherein the processor is further configured to execute the program code to determine at least one of a size and a position of the gap.

20. The electronic device of claim **9**, wherein the processor is further configured to execute the program code to determine a position of the graphical user interface element relative to the gap.

21. An apparatus comprising:

means for presenting images on a first display surface, wherein the first display surface includes a graphical user interface that includes a graphical user interface element associated with an application;

means for presenting images on a second display surface, wherein the first display surface is separated from the second display surface by a gap;

means for determining a movement of the graphical user interface element relative to the gap; and

means for initiating an action associated with the application in response to the determined movement.

22. The apparatus of claim **21**, wherein the graphical user interface element is one of a plurality of graphical user interface elements displayed on the first display surface.

23. The apparatus of claim **21**, wherein the action includes at least one of launching and closing the application.

24. A computer readable medium storing computer executable code comprising:

code for presenting images on a first display surface, wherein the first display surface includes a graphical user interface that includes a graphical user interface element associated with an application;

code for presenting images on a second display surface, wherein the first display surface is separated from the second display surface by a gap;

code for determining a movement of the graphical user interface element relative to the gap; and

code for initiating an action associated with the application in response to the determined movement.

25. The computer readable medium of claim **24**, wherein the graphical user interface element is at least one of an application icon and an application interface window.
